

EDUCATION

- **University of Tennessee, Knoxville, TN-37916, USA**
GPA 4.00/4.00
2021–July 2025
PhD in Computer Engineering
- **University of Kentucky, Lexington, KY-40506, USA**
GPA 3.879/4.00
2017–2021
Bachelor of Science in Computer Engineering

ENGINEERING
SKILLS[Level:
Advanced]

- **Programming Languages:** Python, Embedded C, C, C++, C#, Rust, Verilog/SystemVerilog, VHDL, Java, Matlab, ARM/x86 Assembly.
- **Architectures/Applications:** RTOS, Cryptography, FPGA Design and Synthesis, OOP, CUDA, RISC-V, ARM, RTL Design/Verification, Linux Kernel, CAN, UART, Multi-core computing.
- **Machine Learning & Quantum Libraries:** Keras, Pytorch, Tensorflow, IBM Qiskit, PennyLane.
- **Design/Other Tools:** Virtuoso, Xilinx Vivado, Keil µVision, Intel Quartus, Git, GDB.
- **Operating System:** Windows, Linux (Unix).

EXPERIENCE

- **NSF Graduate Research Fellow**, Dept of EECS, University of Tennessee, Knoxville (2022-Present)
- Teaching Assistant, Dept of EECS, University of Tennessee, Knoxville (2021-Present)
- Undergraduate Research Assistant, Dept of ECE, University of Kentucky, Lexington (2019-2021)

DISTINCTIONS
AND
AWARDS

- **2022–Present - NSF Graduate Research Fellowship Program (GRFP):**
Prestigious fellowship awarded to outstanding students with significant contributions to STEM.
- **2025 - UTK Gonzalez Outstanding Graduate Teaching Assistant Award:**
Award for outstanding commitment, dedication, and notable ambition in EECS academic pursuits.
- **2021 - Upsilon Pi Epsilon (UPE) Award:**
IEEE Computer Society Award for Academic Success in Computer Engineering.
- **2020 - Schneider Electric Fellowship, University of Kentucky:**
Smart-Home Research on ML-based CPS Anomaly Detection in collaboration with SPARK Lab.

RELEVANT
PROJECTS

- **Crystals-KYBER-based Post-Quantum Cryptographic 3D Printing Security - HOST 2024 Hardware Demonstration with UTK SEAMTN**
 - Developed a Crystals-KYBER **post-quantum cryptographic framework in embedded C** for 3D Printer in collaboration with Southeastern Advanced Machine Tools Network (SEAMTN).
 - Engineered a novel & highly efficient **CAN communication tree/graph** structure for 3D printers with colleague Joseph Clark.
 - Built a proof-of-concept 3D printer farm, presented as hardware demo at security conference HOST 2024, with **simple API callback structure for plug-and-play**.
 - Taught prospective engineers offensive/defensive security for manufacturing networks with Kali.
- **Post-Quantum Cryptographic Vehicular Security Framework - UTK/DoD-funded Dissertation Research**
 - Developed an **embedded CAN framework in C** that is safe from quantum threats for commercial vehicles while adhering to original ISO 11898 protocol specifications.
 - Built embedded testbench with Physically Unclonable Functions for collecting performance benchmarks.
- **Smart-Home Sensor Anomaly Detection using Keras Deep Learning - Research Collaboration with Schneider Electric fellowship**
 - Proposed a **ML model** to identify sensor anomalies in Honda US Smart Home data.
 - Trained deep learning **neural network model in Python** in collaboration w/ Schneider Electric.
- **ASHRAE-based Smart Home COMFORT Controller - UKY Senior Project, Best CAPSTONE Award 2021**
 - Designed Smart HVAC with the UKY Spark Lab to meet ASHRAE “COMFORT” Standards.
 - Lead small team to develop a lightweight, **secure communication firmware/API with embedded C, C++, and C#** for WLAN-based, smart integration for HVAC devices.

- Documented various performance and functionality metrics for future use in Spark Lab.
- **GUI Operating System Designed for RISC-V Architecture - Graduate Classwork in Adv. Operating System Design**
 - Designed an **operating system and SBI in C** for a virtual **RISC-V** with GUI/input support.
 - Implemented supervisor, hypervisor, and user modes for privilege protection.
 - Utilizes **“hardware threading”** for a multi-core RISC-V ISA with power saving capabilities.
- **Quantum Anomaly Detection for Industrial Control Systems - Collaborative Research with Oak Ridge National Lab (ORNL)**
 - Engineered high-accuracy **Quantum ML models in Python** for detecting cyberattacks in critical infrastructures with Oak Ridge National Lab (ORNL).
 - Determined metrics for parametrizing the success, or advantage, of a CPS-related QSVM model on detecting real-world industrial cyberattacks.
 - Investigated the effects of modern NISQ noise in **quantum machine learning**.
 - Designed Python framework for easy integration of IBM Qiskit in Cyberphysical Systems.
- **FPGA-Based Multilayer Perceptron (MLP) as a Neural Network using Verilog - Personal Research Project alongside Md. Saif Hassan Onim**
 - Designed a **MLP neural network accelerator in SystemVerilog** with parametrizable neurons and layers using dedicated DSP hardware on the Intel Cyclone V and Xilinx Artix-7.
 - Implemented **wrapper/controller** for easy interfacing with SoC RAM and I/O.
 - Evaluated various performance metrics of the FPGA design in terms of power, area, and timing.

MAJOR ACADEMIC COURSES

- **Systems Programming, Computer Programming, Network/Software/Embedded Security, System on Chip Design, Machine Learning, Compiler Design, Adv. Operating System Design, Emerging Computing/Quantum, GPU & Multicore Programming, Data Mining and Analytics, Adv. Embedded Systems, Algorithm Design/Analysis, Digital Logic Design**
